

## **2019 Agri-Food Innovation Summit and Government Information Sessions** May 13 - 14 • Ottawa, ON

In recent years, major steps have been taken to accelerate innovation and research in Canada and make our agriculture and agri-food sector a priority.

- How can discoveries in one sector affect another?
- Who benefits from scientific discoveries?
- How can the impact of agricultural research be measured?

Parliamentarians, officials and key policy makers need to answer these questions.

We are fortunate that many scientific world leaders call Canada home. That is why AIC is bringing representatives from across many sectors together to discuss areas for future collaboration and share information.

### **May 13 - Agri-Food Innovation Summit**

Senior representatives from Canada's Innovation Superclusters and the Clusters funded through AAFC's AgriScience Program will deliver presentations and panels, share information about their clusters' work, and discuss collaborative paths forward.

Delegates will include key industry stakeholders, agricultural researchers and entrepreneurs and members of the broader scientific community.

### **May 14 - Government Information Sessions**

Communicating the successes and needs of our sector to parliamentarians, government officials and senior political staff is key to moving our agenda forward.

That is why AIC will be organizing a number of information sessions to deliver our message.
